

Data Ingestion Commands

Here are the ingestion commands for the 3 useful cases.

1. Ingest only clean data

```
python -m app.ingestion.processor DATA/true_data true
```

This wipes Qdrant first, then indexes only the clean documents from `DATA/true_data`.

2. Ingest only 10 noisy files

```
python -m app.ingestion.processor DATA/noisy_sample_10 noisy
```

3. Ingest only 15 noisy files

```
python -m app.ingestion.processor DATA/noisy_sample_15 noisy
```

Use `--wipe` when you want a fresh Qdrant collection. If you want to append noisy files after clean data, omit `--wipe` on the noisy ingestion command.
